There has been an overall decrease in the number of young children in New York, which is reflective of a global trend in fertility rates. Researchers at the University of Washington's Institute for Health Metrics and Evaluation showed the global fertility rate nearly halved to 2.4 in 2017 and their study, published in the Lancet, projects it will fall below 1.7 by 2100. The number of under-fives will fall from 681 million in 2017 to 401 million in 2100. This decrease is driven by more women in education and work, as well as greater access to contraception, leading to women choosing to have fewer children. This will lead to various issues, including the negative consequences of having a negative age structure (more older people than young people). [1]

High-quality prekindergarten programs for 3- and 4-year-olds can improve school readiness, with the greatest gains accruing to the highest-risk children. Head Start and the expansion of state-funded programs since the 1990s have greatly increased access to preschool. But many children, especially 3-year-olds, continue to be left out, exacerbating socioeconomic differences in educational achievement.

Reading to children has numerous demonstrated benefits, including cognitive and language development, bonding with parents, a greater vocabulary.4 Among 9- and 13-year-olds, the percentages of youth who said in the 2019-20 school year that they "read for fun on [their] own time almost every day" were at their lowest points since the question was first asked in 1984, according to the survey, which was fielded among U.S. public and private school students before the COVID-19 outbreak. It is unclear whether the pandemic may have changed these patterns.[5] For students experiencing poverty, the situation is even more dire: 82% of students eligible for free or reduced lunches are not reading at or above proficient levels by fourth grade.

The Literacy Project Foundation found that three out of five people incarcerated in prisons can't read and that 85% of minors who have been charged with a crime have trouble reading. Such literacy disparities are linked with high recidivism rates— education being one of the surest ways to reduce the rate of becoming re-incarcerated.[6]

Social Vulnerability Index, All Ages

The Social Vulnerability Index (SVI) model was developed by the U.S. Centers for Disease Control and Prevention (CDC) as a way to use data to identify vulnerable populations.

The SVI may be used to rank overall population well-being and mobility relative to county, state, and national figures. Measures are grouped into four major categories: Socioeconomic Status, Household Composition and Disability, Minority Status and Language, and Housing and Transportation. The SVI can also be used to determine the most vulnerable populations during disaster preparedness and public health emergencies, including pandemics.[9]

SVI Measure Categories	SVI Measures
Socioeconomic Status	Below Poverty Unemployed Income No High School Diploma
Household Composition & Disability	Age 65+ Age Below 18 People Living with a Disability Single-Parent Households
Minority Status & Language	Ethnic/Racial Minority Limited or no English Proficiency
Household Type & Transportation	Multi-Unit Structures Mobile Homes No Vehicle Group Quarters

[9] Agency for Toxic Substances and Disease Registry, CDC/ATSDR Social Vulnerability Index.

Within St. Lawrence County, Massena has the largest population of the towns at 10,377, followed by Ogdensburg at 10,153. Nearly a third of the households in Gouverneur are living below poverty level, higher than the rest of the service area. Approximately three-fourths of children in Brasher Falls live in single-parent households. Single-parent families – and especially mother-only households – are more likely to live in poverty compared to married parent households. Given this, kids of single parents are more likely to experience the consequences of growing up poor. Children in poverty are more likely to have physical, mental, and behavioral health problems, disrupted brain development, shorter educational trajectories, contact with the child welfare and justice systems, employment challenges in adulthood and more. [10]

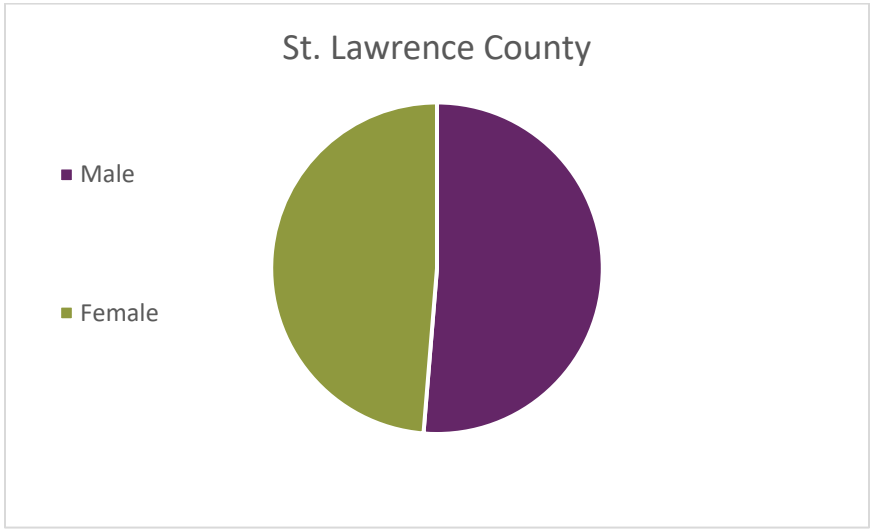
[11] Includes naturalized U.S. citizens and non-citizens

[12] The Census Bureau classifies all people not living in housing units as living in group quarters. A group quarters is a place where people live or stay, in a group living arrangement, that is owned or managed by an entity or organization providing housing and/or services for the residents.
This is not a typical household-type living arrangement. These services may include custodial or medical care as well as other types of assistance, and residency is commonly restricted to those receiving these services. People living in group quarters are usually not related to each other.
Group quarters include such places as college residence halls, residential treatment centers, skilled nursing facilities, group homes, military barracks, correctional facilities, and workers' dormitories, U.S. Census Bureau Glossary

Core Demographics, All Ages

Exhibit 23: Population by Gender



Brasher Falls experienced the largest percent change in population from 2010 to 2017-2020, with a 19.4% increase. Potsdam experienced a 9.2% decrease in population from 2010 to 2021.

Education

The highest level of educational attainment for nearly two-thirds (57.3%) of the population in Brasher Falls is a high school degree. Gouverneur, Massena, Norwood, and Ogdensburg also have high levels of population whose highest levels of educational attainment are a high school degree. Approximately 13.9% of the population in Ogdensburg does not have a high school diploma. Potsdam and Canton have the highest levels of population with a graduate or bachelor's degree, with approximately half of the population in Canton with a bachelor's degree or higher.

Proficiency in reading by the end of third grade is a crucial marker in a child's educational development. In the early years, learning to read is a critical component of education. But beginning in fourth grade, children use reading to learn other subjects, and therefore, mastery of reading becomes a critical component in their ability to keep up academically. Children who reach fourth grade without being able to read proficiently are more likely to drop out of high school, reducing their earnings potential and chances for success.[15]

Over 40% (19 million) of renter households in the country spent more than 30% of their income on housing costs in the 2021 period, according to new American Community Survey (ACS) 5-year estimates released by the U.S. Census Bureau. Households spending more than 30% on housing costs, including rent or mortgage payments, utilities, and other fees, are considered housing cost burdens according to the Department of Housing and Urban Development's definition of affordable housing.[16] The overwhelming majority of cost-burdened population in the service area are renters, with over two-thirds of renters in Gouverneur and Potsdam and approximately half of renters in Massena, Norwood, and Parishville experiencing cost burden.

Approximately one in five low-income households in Potsdam are severely cost burdened, higher than elsewhere in the service area.

Source: Feeding America Map the Meal Gap, 2020

[17] Note: Our local estimates of food insecurity for congressional districts and states for 2020 are not directly comparable to estimates for other years. This is because, due to the impact of the COVID-19 pandemic on data collection in 2020, the Census Bureau released 5-year (2016-2020) American Community Survey (ACS) data for congressional districts instead of the traditional 1-year estimates that we've historically used to estimate district and state food insecurity. District and state estimates of food insecurity for 2020 can, however, be used to make comparisons across similar geographies (e.g., District A to District B in 2020). Users interested in comparing estimated food insecurity for individual districts or states over time are encouraged to compare our most recent data for 2021 to data from 2019 and/or 2018. If you have questions about the comparability of our data over time or across populations or places, please contact research@feedingamerica.org.

Approximately 50% of the child population in St. Lawrence County is receiving free or reduced price lunch.

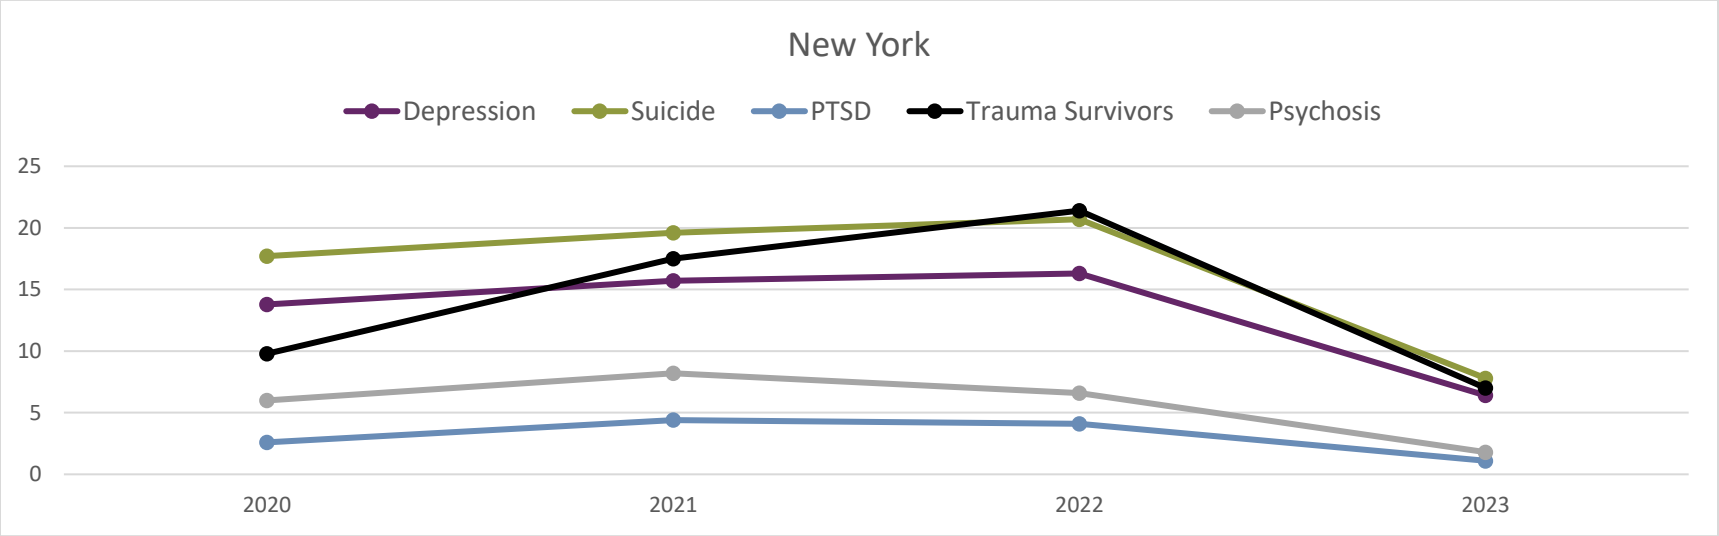
[18] **Children living in crowded housing are the share of children under age 18 living in households that have more than one person per room. The ratio of occupants per room is derived by dividing the number of persons in the housing unit by the number of rooms in the housing unit. A housing unit is considered crowded if there is more than one person per room. Occupants per room is rounded to the nearest hundredth,** Children living in crowded housing | KIDS COUNT Data Center (aecf.org)

Behavioral Health

Mental health risk assessment rates[19] for youth decreased significantly from 2020 to 2023. There was a 70.0% change of psychosis rates from 2020 to 2023. Note: county level data was not available for youth rates.

Exhibit 46: New York Youth Mental Health Risk Assessment Rates



Rate per 100,000	2020	2021	2022	2023	Percent Change 2020 to 2023

The National Mental Health Services Survey (N-MHSS) is an annual survey of facilities providing mental health treatment. It is conducted by the Substance Abuse and Mental Health Services Administration (SAMHSA). The N-MHSS collects data on the location, characteristics, services offered, and number of clients (collected every other year) in treatment at mental health treatment facilities (public and private) throughout the 50 states, the District of Columbia, U.S. territories, and other jurisdictions.

In New York, 802 mental health treatment facilities were included in the 2020 N-MHSS report, which reported a total of 275,048 clients in mental health treatment on April 30, 2020. The survey response rate in New York was 90.5%.[21]

Exhibit 49: New York Mental Health Facility Service Settings

	Facilities		Clients	
	Number	Percent	Number	Percent
Service Setting, by number and percent				
24-hour hospital inpatient	113	14.1%	4,077	1.5%
24-hour residential	76	9.5%	2,341	0.9%

Does this child currently have asthma?	87.4%	4.2%	8.4%	85.9%	3.7%	10.5%	88.1%	3.9%	8.0%

Source: 2020-2021 National Survey of Children's Health: Number of current or lifelong health conditions, New York.

[27] In most cases, in order to be counted towards a current or lifelong condition, parents had to answer yes to 2 questions about the particular condition: 1) have they ever been told by a health care professional or educator that the child has the condition, and 2) whether the child currently has the condition. However, children who were ever told by a health care professional that they had blood disorders, cystic fibrosis, genetic or inherited conditions, or Down-Syndrome were counted toward the measure as these are considered lifelong conditions. The questions about hearing and vision problems were reported by parents on whether the child has "deafness or problems with hearing" or "blindness or problems with seeing, even when wearing glasses". Please note that throughout the NSCH, all information about children's health conditions is based on parent recollection and is not independently verified.

Children aged 0-4 years have the lowest percentage of asthma prevalence, though that number doubles for the 5-9 age group.

Exhibit 54: New York Child Lifetime Asthma Prevalence

	Sample Size	Prevalence (Percent)
Age Group		
0-4	205	5.8%
5-9	309	11.2%

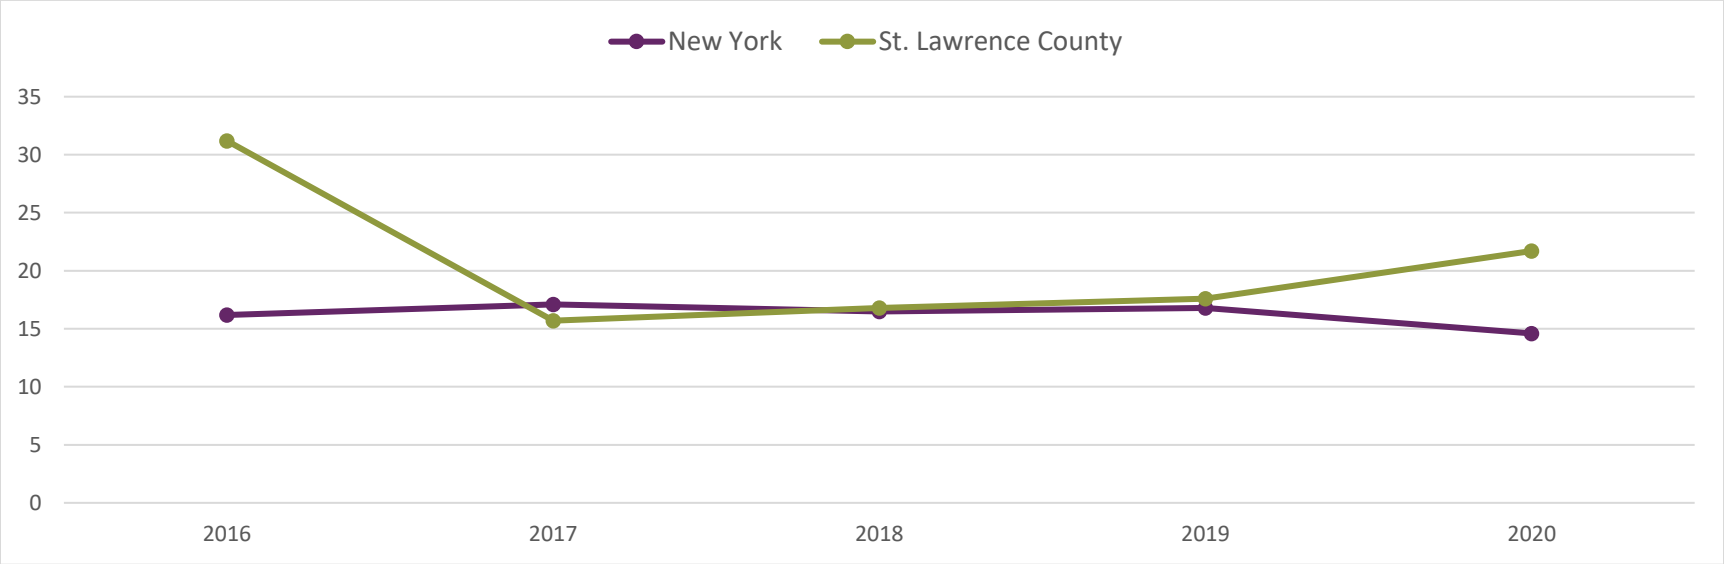
Child Maltreatment and Abuse

Child abuse rates in St. Lawrence County decreased from a high of 31.2 in 2016 to 21.7 in 2020. St. Lawrence County rates have been higher than statewide rates since 2018.

Exhibit 58: Child (Age 0-17) Abuse Rates



Rate per 1,000 children/youth ages 0-17 years	2016	2017	2018	2019	2020
New York	16.2	17.1	16.5	16.8	14.6
St. Lawrence County	31.2	15.7	16.8	17.6	21.7

Source: New York State | Council on Children & Families, Kids' Well-being Indicators Clearinghouse (KWIC)

The child maltreatment data collected from states and analyzed for this year's report continue to show decreases that can partly be attributed to the continuing pandemic caused by COVID-19.3 Additionally, states were encouraged to provide comments about how their child welfare agencies conducted operations during the year and how they dealt with the ongoing pandemic. Most states resumed in-person child protective services responses and agencies said that they provided workers with personal protective equipment and conducted prescreening for symptoms of COVID-19. Many states voluntarily provided comments, which are included in Appendix D, State Commentary[29]

Exhibit 59: New York Child Maltreatment Victim Rates by Race & Ethnicity
